EVS Advanced

The heart of our extraction system

Specialists in squeezing limes and lemons

New
Boost Up Kit
#1 in yield and savings!

EVS
ADVANCED

Efficient Vertical System (EVS) is what makes us different. EVS gives you the most natural juice and with the purest possible taste, no acids, or oils from peel in the juice. It will maximize the yield per fruit, the juicer efficiency, and your business profitability.

With our unique system and our different size kits, squeezing limes and lemons has never been easier.

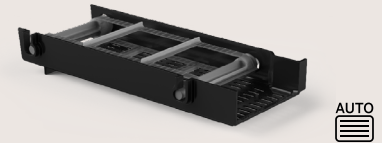

The fruits we squeeze:

Color kits

Automatic filter

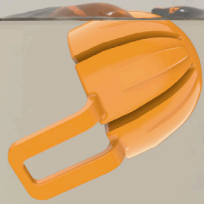

It has a direct impact on the high performance of the juicers. Fully integrated into the machine, it starts moving when the juicer is activated, sweeping any seeds and pulp that may remain on the filter after the juicing process.

Viva ADVANCE

A new concept in citrus squeezing has arrived

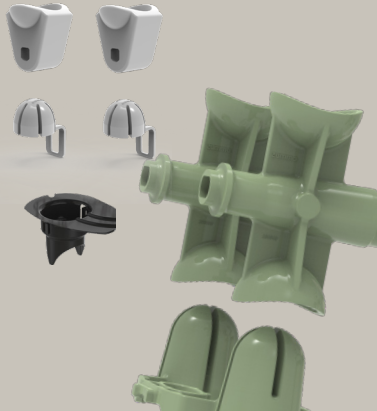

EasyClean

The juice extraction process has been developed to minimize splashing, reduce the pulp residue generated and avoid clogging of the peel. In addition, the cleaning process of the parts is very easy and intuitive, providing great usability to the operator and maximizing autonomy.

Closed Chamber

Closed Chamber is a concept of integral connection of the parts that make up the juicer. This system combines usability with the greatest possible hermeticity and protection of the juicer system, as it prevents the entry of external agents, guaranteeing maximum safety for the consumer.

Limes, Key Limes & Lemons

New Kits

Our new small and extra small kits specialize in squeezing the smallest of citrus such as limes and lemons. With this new addition, our systems now squeeze all types of citrus.
