Why Zummo?

1 JUICE PURITY

Our **EVS®** vertical juicing system is the essence of our juicers, what makes them stand out. The juice never touches the peel and its route to the glass is minimal, guaranteeing maximum purity and the most natural flavour

2 FOOD SECURITY

Zummo juicers guarantee maximum safety for the customer, both during juice production and consumption.

And not only that, the **Food Defence** also plays a fundamental role, making the inside of the machine inaccessible to the customer.

3 MULTIFRUIT

The **Z40** juicer is the **ONLY** juicer in its category on the market that, in addition to squeezing oranges in the most efficient way, also accepts any other type of citrus fruit in addition to pomegranates.

4 SAVING WORKING TIME

Zummo is the most cost-effective option. Thanks to its technology you will keep the cleaning time to a minimum and save on maintenance services.

5 SALES IMAGE

The image and warmth perceived at the point of sale is essential to gain customer confidence.

A clean-looking juicer generates an increase in juice sales of 20-30% compared to machines that convey a dirty image, with dried pulp or half-squeezed oranges.

EVS[®] Advanced

The heart of our extraction system

Our exclusive vertical juicing system, EVS[®] is the essence of our juicers, and it is what sets us apart: flavor, purity and yield in every movement.

Efficient Vertical System (EVS) is what makes us different. EVS gives you the most natural juice and with the purest possible taste, no acids, or oils from peel in the juice. It will maximize the yield per fruit, the juicer efficiency, and your business profitability.

More pure and natural juice

The oils that are naturally present in the peel of the fruit never enter into contact with the juice or with the parts that make up the juice extraction kit.

Maximum efficiency

It prevents jamming caused by peel, and it minimises splashes and pulp waste that might be generated, further facilitating the cleaning process.

The fruit drops from the basket to the cup

The cups rotate 90° around their own axis, and the fruit is cut vertically

Each cup houses one half of the fruit and continues to rotate up to 180°

The cut fruit is pressed vertically against the balls and the juice obtained goes directly to the container
